

Are questions on origins starting to pop up in your youth group?

What about Evolution? I heard that it is how we all came to be?

What about the dinosaurs? Where do they fit?

Are you sure about this?

What about the monkeys - don't humans share 98.5% of the same DNA as monkeys?

What about the rocks and the fossils - don't they date millions of years old?

Can God's Word really be trusted in this Scientific Age?

What about the Fossil Record - doesn't it prove Evolution?

What about genetic mutations - I've heard that can really cause evolutionary changes?

In today's culture, students are continually bombarded with theories upon theories that undermine the very core of their belief system. But do these theories really hold true when examined in greater detail? Are there alternate views to these ideas that really have some scientific grounding?

If you feel your students need answers ... we can help you!
